Preface and Acknowledgements

Meaningful collecting is both object and idea bound. Neither “taste” operating in a conceptual vacuum, nor “systems” that arrange items within a preconceived pattern will yield live and rewarding results. The former tends to produce capricious fragments, the latter translates the objectives of the stamp collector into an area where these do not apply. Dr. and Mrs. Barnett Malbin’s *Lydia and Harry Lewis Winston Collection* avoided both pitfalls from the outset. Harry and Lydia Winston, who started the collecting process many years ago, and Dr. Barnett Malbin who, at Lydia’s side, continued the work in recent years, were all committed to an attentive scrutiny of individual works as well as to a functional placement of such works within the collection as a whole. It is this parallel awareness that determined the authority of the effort and the quality of the result.

The key concept in the Winston Collection is Futurism; and it is the quantity and quality of Futurist works that confer a particular status upon the collection and that assure its distinctiveness and character. But Futurism in the Winston Collection merely provides the main accent. Cubism and Purism, Dada and Surrealism, as well as some European and American currents of the post-war era are not only represented but have become an integral part of a visual unity, in fact, a study in visual relationships between styles of modern art. Boccioni, Balla, and Severini—the great trio of Futurist artists—are represented by key examples in various media, and in relatively large numbers. The Italian contingent is rounded out by the painters Russolo, Carra and Sironi and the sculptor Medardo Rosso. From this Italian core, the collection moves easily into Cubism where Picasso, Braque, Léger and Gris are supported by Delaunay, de La Fresnaye and Gleizes. In a different direction the Futurist center radiates toward Dada and Surrealism, as witnessed by a group of carefully chosen Schwitters, some Arp sculptures and works on paper, Max Ernst, Picabia and a marvelous Miró oil. The Guggenheim selection here attempts to follow the collection’s impartiality toward medium. Archipenko is shown in works on paper as is Max Ernst, while the sculptors Brancusi, Calder, Giacometti, Lachaise, Laurens, Moore and Pevsner are represented by their most characteristic three-dimensional achievements. While the Winston Collection remains, for the most part, a grouping of European modernists of the now classical phase, post-war developments are by no means neglected. Tobey, Pollock, Louis, Noland and Stella represent an important segment of the collection’s American holdings while Appel, Jorn, and Corneille, as well as examples from the School of Paris, furnish the European counterpart.

Those who create objects, or shape words into meaningful expressions or those who aim for tonal resolutions, are mirror makers. Their need is to fashion something that will return their own image, something that will allow them to see themselves in the reflection of their work. This common need for mirrors is by no means restricted to artists, unless we use “artist” in the broad sense of creative man at large. An art collection becomes a composite art-form when shaping instincts are translated into formal entities. In works of art, as in the collecting process, the capacity for ordering is rare, and objects therefore mostly remain devoid of meaning just as object assemblages fail to achieve significance. Exceptions to this situation are therefore particularly satisfying. Dr. and Mrs. Barnett Malbin’s *Lydia and Harry Lewis Winston Collection* exemplifies an attainment of the collector’s clear and positive mirror-image that is the result of authentic involvement and of serious, knowledgeable striving.

I am grateful to the numerous individuals within and outside the Guggenheim Museum who have been involved in the organization and presentation of the exhibition and its accompanying catalogue. In particular I would like to thank Linda Shearer, Research Fellow at the Guggenheim, who has worked on all phases of the project, assisted in the selection of works for the exhibition and contributed an essay to the catalogue. Also central to the success of the undertaking was the participation of Marianne W. Martin, Professor at New York University and author of the second catalogue essay. Mrs. Martin's special knowledge of Futurism made her generous advice invaluable to us. Ellen Sharp and Paul Binai of the Graphics Department of the Detroit Institute of Arts assisted with the Boccioni drawings and Jane Hickey, who has kept Lydia Malbin's extensive records up to date, has also been most helpful. Marianne Martin, in turn, expresses her gratitude to Joan M. Lukach of Cambridge, Massachusetts and Piero Pacini of Florence for their help, while Linda Shearer is indebted to William A. Camfield, Houston and to Sidney Geist, New York for clarifying matters of scholarly importance. The entire Guggenheim staff has contributed its time and skills and the following should be singled out for their direct participation: Roger Anthony, Carol Fuerstein, Linda Konheim, Beverly Liftman, Sabine Rewald and Orrin Riley.

Beyond Futurism: The Winston/Malbin Collection

Lydia Winston Malbin grew up in Detroit in an atmosphere of devotion to the highest cultural aims. Her father was the innovative industrial architect Albert Kahn (1869-1949). He amassed an important library of rare books and filled his home with art; his greatest architectural achievements, like the Packard Motor Car Co. (1903-05) and the Chrysler Corporation de Soto Press Shop (1936), foreshadow much contemporary architecture. His daughter's collection demonstrates her own particular understanding of the forces of the twentieth century. Its encyclopedic scope reflects the numerous creative responses to the unique demands of our time.

Surrounded by art from childhood, it was not until the late 1930's that Mrs. Malbin began to collect seriously. In 1938 she had the good fortune to meet Alfred Stieglitz, who then had his American Place Gallery. He discussed modern art with her at great length and encouraged her burgeoning taste for the abstract. Among the first modern works she acquired were two Marins, two Feiningers, a Chagall and a Soutine which represent her early interest in both American and European art. By 1945 Mrs. Malbin had come into contact with Rose Fried, whose Pinacotheca Gallery eventually became the Rose Fried Gallery, which she often visited when she was in New York. Mrs. Malbin frequently acknowledges Mrs. Fried's important role in the formation of her collection: she had championed Arp, van Doesburg, Gabo, Kandinsky, Lissitzky, Mondrian, Picabia and Schwitters at a very early time. As the body of works grew, so did its scope. Yet, remarkably, despite the increasing range, a distinct direction began to emerge, for the collection evolved into one of the finest collections of Futurism extant.

Arp understood the fullness and diversity of the Winston/Malbin collection when he said:

At the one pole the Winston collection contains works whose beauty has not been touched by the eternal transformation of the ephemeral. Among those I would include the works of Mondrian, van Doesburg, Albers, Freundlich, Herbin, Lissitzky, Pevsner and Gabo. At the opposite pole are to be found Boccioni, Masson, Pollock and Schwitters.¹

Arp implicitly poses the question of whether it is possible for the apparent opposition to be resolved. Can Arp and Albers or Miró and Mondrian co-exist with their dissimilarities of intention and inspiration, which extend to the point of openly stated antagonisms of the esthetic sensibility? Can an awareness of twentieth-century art be revealed through a seemingly chaotic assembly of work? Arp seems to be emphasizing precisely the *potential* for such contradiction between the two fundamentally different approaches — romantic/classical, open/closed, multiple/unified, the committedly political/the purely esthetic. A confrontation of this nature is central to the Futurists' art; from such a collision a synthesis emerges to form a higher vision.

Let us leave Wisdom behind like a horrible mine . . . Let us throw ourselves to be devoured by the Unknown, not because we are desperate, but simply to enrich the bottomless reservoirs of the Absurd.

F. T. Marinetti, 1909²

1. Jean Arp, "Serious and Droll Speculations," *Collecting Modern Art*, exhibition catalogue, Detroit Institute of Art, 1957-58, p. 28

2. F. T. Marinetti, "First Futurist Manifesto," quoted in Marianne W. Martin, *Futurist Art and Theory: 1909-1915*, Clarendon Press, Oxford, 1968, p. 40

One must start with the central nucleus of the object one wants to create, in order to discover the new forms which connect it invisibly and mathematically to the visible plastic infinite and to the interior plastic infinite. The new plasticity will thus be the translation in plaster, bronze, glass, wood, or any other material, of atmospheric planes that link and intersect things. What I have called physical transcendentalism can render plastically the sympathies and mysterious affinities which produce the reciprocal and formal influences of the objects' planes.

Umberto Boccioni, 1912³

The range of Futurist theories opened up countless areas for other artists. The Dada and Surrealist movements developed directly out of ideas such as those expressed by Marinetti, while the Russian Constructivists were able to actualize what Boccioni had vehemently advocated but never realized in full. The international repercussions of the Futurists are due largely to their proselytizing manifestos and lecture tours. In addition, it has been observed that Boccioni's 1913 sculpture exhibition in Paris seems to have left an impression on a variety of artists: see Brancusi's *Prodigal Son*, 1915, Duchamp-Villon's *The Horse*, 1914, Archipenko's *Boxers*, 1913, all of which evidence a new element of dynamic and asymmetrical thrusts of space and mass.⁴ But without doubt, the greatest impact of Futurism occurs in the two seemingly opposed movements of Dada/Surrealism on the one hand, and of Constructivism on the other.

The initial Futurist movement was cut short by World War I; by 1916 Dada had grown out of it. Artists reacted in various ways to pressures exerted by the War. The Futurists had welcomed War enthusiastically since they felt it heralded the destruction of all traditional values. However the Dadaists' social point of view is negative and cynical: war and its attendant death and devastation is to them one expression of society's decay. In Germany particularly, where the economic depression was most severe, the Dada spirit was most active. Dadaists like Arp, Ernst and Schwitters in Germany and Duchamp and Picabia in New York and Paris created an art form as revolutionary as the Futurists had—an idiom which was a unique expression of the period. Irreverence and love of nonsense, blasphemy and political activism exists in both Dada and Futurism, tying them together on one level.

On a more substantial level, the two movements are related by an overriding faith in the artist's intuitive powers. Reinforced in part by the philosophy of Bergson and Nietzsche, men like Arp, Ernst and Schwitters recognized the need to return to a near-primary state in order to establish a non-static viewpoint that encouraged the artist's most personal expression and reflected the fluctuating and changing nature of life. Arp evolved one such solution. Speaking of his and Sophie Taeuber's work of c.1915, Arp wrote:

We rejected everything that was copy or description, and allowed the Elementary and Spontaneous to react in full freedom. Since the disposition of planes, and the proportions and colors of these planes seemed to depend purely on chance, I declared that these works, like nature, were ordered "according to the law of chance," chance being for me merely a limited part of an unfathomable raison d'être, of an order inaccessible in its totality.⁵

Not only is Arp's work associated with nature through eternal laws contributing to its creation, but also through his particular type of abstraction, whose organic configurations recall and suggest foliage or animal life. Pre-dating Surrealist automatic writing, Arp's spontaneous approach re-

veals a profound grasp of his inner powers. His unique biomorphic shapes recur in both Miró and Calder (cat. nos. 68, 34) who also create a world based on imagination unrelated to objectively perceived reality. Because of Arp's emphasis on fantasy and the spontaneous workings of the mind, his art functions on multiple levels of association; certain shapes quite literally metamorphose into others, simultaneously altering and expanding their original connotations. These image transformations parallel the states and processes of the mind which preoccupied Arp. He found a subtle and abstract style to express these ideas — ideas which had been more explicitly handled by Russolo in *Perfume*, c. 1909 (cat. no. 93).

By 1919, Arp was working closely with Ernst in Cologne where they established an alternative to the far more political Dada contingent based in Berlin. Ernst, too, was concerned with the metamorphosis or multiple identity of images. But he, for the most part, uses absolutely realistic objects arranged in specific, and often ironic, relation to one another. The collage *Sitting Buddha* (cat. no. 38) is a humorous vision of the subject put together from biological drawings and reveals Ernst's peculiar sense of juxtaposition which later had great impact on Surrealism. Although their work assumed very different forms, Arp and Ernst's sensibilities were remarkably alike. Ernst endeavored to explore his mind's apparatus as freely as possible by means of "frottage." Frottage is a process, named in 1925 by Ernst, based on the traditional technique of rubbing. Ernst was no doubt encouraged in his quest for such a method by Breton's 1924 *Surrealist Manifesto*. Ernst has described the events which led to his discovery of this revelatory procedure.

Beginning with a memory of childhood . . . in the course of which a panel of false mahogany, situated in front of my bed, had played the role of optical provocateur of a vision of half-sleep, and finding myself one rainy evening in a seaside inn, I was struck by the obsession that showed to my excited gaze the floor-boards upon which a thousand scrubblings had deepened the grooves. I decided then to investigate the symbolism of this obsession and, in order to aid my meditative and hallucinatory faculties, I made from the boards a series of drawings by placing on them, at random, sheets of paper which I undertook to rub with black lead. In gazing attentively at the drawings thus obtained . . . I was surprised by the sudden intensification of my visionary capacities and by the hallucinatory succession of contradictory images superimposed, one upon the other, with the persistence and rapidity characteristic of amorous memories.⁶

Both *Come Into the Continents* and the oil *Composition* (cat. nos. 40, 39) were made in this manner, demonstrating his unique insight into a fantasy world quite unlike Arp's. Appropriately, Arp wrote the introduction to Ernst's 1926 *Natural History*, a portfolio of his frottage drawings (an edition of which is in the collection). *Come Into the Continents* is related to two of this portfolio's plates. In his introduction, Arp incorporated the actual titles from the drawings—"enter the continents without knocking but with a muzzle of filigree."⁷

Both artists foreshadowed the Surrealist movement in which they were active participants by 1924. The Surrealist insistence on "pure psychic automatism" and "the omnipotence of the dream" obviated, to a certain extent, that quality of spontaneity which characterizes the early Arp and Ernst. This lack of spontaneity on the part of the Surrealist painters largely resulted from the influence of Breton, who extolled conscious control of the unconscious. Moreover, Breton's literary background undoubtedly set the stage for a movement less oriented toward the visual. Nevertheless, Miró's paintings of the 20's, like *Personage* (cat. no. 68), and Tanguy's work in his best known man-

6. Max Ernst, *Beyond Painting*, Wittenborn, New York, 1948, p. 7

7. Arp, *op. cit.*, p. 38

ner, like *Shadow Country* (cat. no. 108), represent two of the more visual aspects of the movement. Miró's abstract, biomorphic forms floating in an infinite azure space constitute an image which contrasts dramatically with Tanguy's precisely rendered dream-like and abstracted shapes grounded in a landscape setting. While Miró and Tanguy developed respectively the poetic/magical and the subconscious/dream-like tendencies of Surrealism, Masson (cat. no. 65), abandoned himself to the powers of automatism which enabled him to utilize to the fullest extent his intuitive sense of line and tension. The elements of chance, of accident, of randomness and coincidence have, of course, always played a certain part in the creative process. The Dadaists, however, impelled by the Futurists, made these elements more integral to their work to create a more dynamic art.

Another artist who, like the Futurists, strove vigorously to break down the barriers between discrete states of mind and precise points of termination was Kurt Schwitters (cat. nos. 94-98). Working out of a Cubist-Futurist impetus, he exemplifies the artist who totally and absolutely integrates object with background, life with art. Schwitters, who developed his own exuberant form of Dada in Hanover called "Merz" (from *Kommerzbank*), was a poet, as was Arp. Perhaps their propensity toward other art forms enabled them to be more open and expansive in the plastic arts and less concerned with the purely formal. The Futurists had been greatly involved with concrete poetry and carried over the use of words, sounds and letters into their art. These concerns are also very much a part of Schwitters' work. Although Schwitters' delicate collages and frequently less gentle constructions are based on well-composed Cubist structural formats, his unorthodox use of materials—personal possessions, discarded scraps and refuse culled from the streets—expanded Boccioni's concept of new materials creating a new reality:

*Transparent planes, glass, sheets of metal, wires, external or internal electric lights can indicate the planes, inclinations, tones and halftones of a new reality . . .*⁸

*Why, then, should sculpture remain shackled by laws which have no justifications? Let us break them courageously and proclaim the complete abolition of the finished line and the closed statue. Let us open up the figure like a window and enclose within it the environment in which it lives. Let us proclaim that the environment must form part of the plastic block as a special world regulated by its own laws.*⁹

Although Boccioni had advanced such theories, he still clung, in practice, to the figure as subject. Schwitters furthered the Futurist proclivity toward the fusion of sculptural object and environment through the destruction of traditional definitions of line, mass and space. Starting in the 1920's, Schwitters fabricated the *Merzbau*, which was built into his house in Hanover. It was an accretion of objects which proliferated and changed daily, growing over the years into a huge all-encompassing sculptural structure. In the course of his career, he built three of these; he worked on the second between 1937 and 1940 in Norway, while the third was begun in 1941 in England. These constructions, now destroyed, were the fulfillment of his ideal of total inclusiveness. Schwitters' accumulated environment represented something very different from the Futurist concept of fast-moving modern Europe. The age of technology had not left a positive impression on him; its waste products rather than its achievements consumed his interest.

Certain Dadaists did not ignore the fact that the machine age had spawned them. The Dada obsession with thought processes and states of mind was translated through the exploration of chance and accident into a kind of psychic mechanism. Picabia's *Alarm Clock I* (cat. no. 79) is a

8. Quoted in Martin, *op. cit.*, p. 127

9. Reprinted in Herbert, *op. cit.*, p. 54

superb synthesis of Dada methods of chance and a machine esthetic. Arp witnessed the making of this piece in Zurich where he met Picabia for the first time in 1919. Dismantling the clock in his hotel room, with the impetuosity for which he was famous, Picabia dipped its parts in ink, placed the inked elements on paper to leave an image, and then added a few lines to hold the composition together. The rashness of the esthetic decision combined with the reassembled, now useless clock expresses the artist's irreverent attitude toward technology and, even more, his ability to transform and break down a mechanical object so that its inner workings are fully revealed.

Duchamp and Picabia well understood that the machine which makes "things" work could be an apt metaphor for the workings (or non-workings) of all "things," even humans. The fact that Picabia depicted Marie Laurencin and the dancer Napierkowska (cat. nos. 78, 77) as non-functional mechanical beings confirms a sense of extreme ambiguity and irony. Both these female apparatuses could perform effectively if they were "turned on," but neither one would perform a concrete, logical function. Both works imply self-contained revolving movement, rather than directional thrust. Moreover, Napierkowska slightly resembles a spinning top, which is what she must have looked like to her audiences. These portraits have ceased to represent an external reality, rather they exist as specific, self-referential fantasy-realities.

The Dada sense of the mechanical age is far removed from the Constructivist sense; yet, both movements were passionately concerned with revealing the laws which govern universal processes. Dada machines are odd, magical, often anthropomorphic and sometimes sinister. The Constructivists never depicted actual machines, but rather attempted to utilize and incorporate real technology to create an art in keeping with the times, times in which they had ultimate faith. Their efforts to surpass external reality in order to arrive at the universal were imbued with a great sense of optimism and enthusiasm, resulting from both the innumerable esthetic possibilities which flowed from the new technology and from the volatile political atmosphere in Russia immediately following the 1917 revolution. Gabo and Pevsner, two Constructivists who figure prominently in the Winston/Malbin collection, both actively absorbed and expanded the basic tenets of Futurist theory in a way quite unlike the Dadaists. Their *Realist Manifesto*, written in 1920 at the height of cooperation between all branches of art and technology in Russia, defines their position vis-à-vis Futurism:

1. *To communicate the reality of life, art should be based on the two fundamental elements: space and time.*
2. *Volume is not the only spatial concept.*
3. *Kinetic and dynamic elements must be used to express the real nature of time; static rhythms are not sufficient.*
4. *Art should stop being imitative and try instead to discover new forms.*¹⁰

The use of the word "realist" has Platonic implications. Gabo and Pevsner propose that their art is founded on the same fundamental and invisible laws of energy and tension as those of the universe itself. Their sculpture constitutes its own world, never imitating or referring to an external reality. The concept of harmony is central and is predicated on an ever-changing and actively regenerative reality.

Boccioni's remarks furnish insight into Gabo and Pevsner's emphasis on space and time in sculpture:

In sculpture as well as in painting, one can renew art only by seeking the style of movement, that is, by forming systematically and definitely into a synthesis that which Impression-

10. Quoted in *Gabo-Pevsner*, The Museum of Modern Art, New York, 1948, p. 10

ism offered in a fragmentary, accidental, and consequently analytical way. The systematization of the vibration of light and of the interpenetrations of planes will produce Futurist sculpture: it will be architectonic in character, not only from the point of view of the construction of the masses, but also because the sculptural block will contain the architectonic elements of the sculptural milieu in which the subject lives.”¹¹

The Russian Constructivists created an art based on the renunciation of mass and the subsequent opening up of space; line was articulated as direction of force and energy, rather than as description. Time was introduced by means of actual and implied movement, capable of defining the space within which the motion occurred. The Dadaists embodied time in their work in a more cerebral and gestural fashion since a certain duration of time often determined the precise form a work of art assumed. Constructions like Tatlin’s complex revolving *Monument to the Third International* of 1920, (never executed in final form) incorporated time as movement in both symbolic and actual forms. The Futurists had articulated the need for a “style of movement,” but they integrated it into their paintings and sculpture primarily on a narrative level.

Gabo and Pevsners’ investigations of motion, though based on an extension of Futurist inspiration, nevertheless stood for a radical departure. Gabo has described the inherent distinctions:

Ask any Futurist how he imagines speed, and on the scene will appear a whole arsenal of raging automobiles, rumbling stations, tangled wire, the clang, bang, noise and ring of the whirling streets This is not at all required for speed and its rhythms Look at a ray of sun—the quietest of the silent strengths—it runs three thousand kilometers in a second. Our starry sky—does anyone hear it?¹²

Pevsner expressed equally vehement feelings about the Futurist actualization of theories on movement:

In the field of painting the task of Futurism went no further than revised attempts to affix on canvas the optical reflex. . . . It is clear to anyone that we cannot re-create motion through a single graphic record of a series of snapshots of arrested movement.¹³

The Constructivists did not seek to transform the human figure into a mechanized robot; instead, in their hands, the figure becomes a form of interacting geometric solids and voids, as in Pevsner’s Cubist-derived copper *Figure* of 1925 (cat. no. 74). The far-reaching effects of Cubism are apparent in both Futurism and Constructivism, but the latter movement more accurately represents a synthesis of the other two. Dependence on Cubist formal innovations, such as constructed objects and the incorporation of unorthodox materials,¹⁴ combined with the realization of Futurist concepts in relation to energy, motion and the breakdown of mass contributed to the uniqueness of the Constructivist style.

Figure, like Gabo’s earlier works of a similar style, has been split open to reveal its invisible workings—not in a biological, individual sense, but in a cosmological, ideal one. In spirit, their abstract constructions correspond to works by the mature Mondrian (cat. no. 69) who also was not concerned with representing externals, but with the creation of a self-contained reality encompassing the delicate balances and contradictions of a total cosmology. By 1922, Gabo, Pevsner,

11. Reprinted in Herbert, *op. cit.*, p. 53

13. *Ibid.*, p. 54

14. Picasso’s sheet metal and wire construction *Guitar* of 1912 (The Museum of Modern Art, New York) is a prime example of a Cubist realization of a work which is neither painting nor three-dimensional sculpture. This construction suggested countless possibilities to other artists.

and Kandinsky had left Russia because they believed in art for its own sake and not in the service of any other cause, such as the state. Tatlin, Rodchenko and Lissitzky continued their careers as artist-engineers with greater stress on the latter; they devoted themselves to the government in an effort to combine their artistic pursuits with the needs and demands of the state, an effort that proved futile in a system which was hostile to non-representational art.

Technology did not catch up with the ideas of Gabo and Pevsner until the late 30's and early 40's. Plastic, which allowed for greater delicacy and transparency, became available, and works like *Linear Construction in Space No. 1*, 1950,¹⁵ resulted. In this piece and others like it, the importance of light has been increased to enhance the artist's manipulation of positive and negative

Naum Gabo
Linear Construction in Space No. 1, 1950

15. This piece is not included in the exhibition because it is too fragile to travel.

space. From the 30's on, Pevsner concentrated on exploring the inherent spatial contrasts of different metals. The Constructivists' handling and use of materials invariably differed from the Dadaists': the latter frequently relied on a juxtaposition of various materials or objects, often of a found or used nature which would result in an ironic statement. On the other hand, man-made or fabricated materials presented the greatest esthetic possibilities to the Constructivists who were encouraged to fully exploit the newest technological discoveries. As with Gabo, stretched lines and rods predominate in Pevsner's works whose organic and natural appearance belies their mathematical basis. In *Fresco, Fauna of the Ocean* (cat. no. 75) of 1944, the straight rods of copper and tin have been fused on the surface to create solid planes which turn and develop within a circular pattern. As a result, the surface appears to vibrate and dematerialize. Furthermore, the appearance of the material slowly changes because oxidation alters the original metal colors to create a luminous turquoise and gold hue. The strong rhythmic energy reiterates the actual motion of the universe, vividly recalling the Futurist "lines of force." Balla's *Fist of Boccioni; Lines of Force* (cat. no. 19) in form and title suggests most accurately a source of many Constructivist works; Balla's sculpture exemplifies a theoretical fusion of physical (the fist) and cosmological (lines of force) energy and tension.

Consistent with their advanced notions, Gabo and Pevsner stressed the importance of "a synthesis of the plastic arts: painting, sculpture and architecture. . . ."¹⁶—again, a type of structural fusion. Lissitzky (cat. no. 61), however, envisioned his art as an even more total statement which integrated all the applied arts, especially typography and photography. He had been a pupil-disciple of Malevich, but was equally enthusiastic about Tatlin and Rodchenko's concern with the unity of art and the state. Like van Doesburg, his personality enabled him to bridge the gap between the two fundamentally opposite approaches. Van Doesburg (cat. no. 37) originally championed the pure and ideal esthetics of the *De Stijl* movement, and later embraced the theories and theatrics of Dada as well. With his wife, Nelly, and Schwitters, van Doesburg traveled throughout Holland presenting Dada lectures and performances. He wrote Dada poetry under the pseudonym of I.K. Bonset, only to be warned by his former *De Stijl* colleague Mondrian about an unknown writer whose ideas seemed extremely dangerous and anarchistic. Of course, this writer was van Doesburg himself, in his Dada guise! This assimilation of contrasting viewpoints does not point to a schizophrenic tendency in van Doesburg; on the contrary, it reveals his personal sense of the inherent similarities of both movements and the equal need of each to construct new realities.

All the artists discussed here were intent upon creating a total world view. Whether it is a Schwitters collage or an Arp sculpture, a Lissitzky Proun painting or a Pevsner construction—the intention of the artist was based on the profound need to construct a new vision in relation to the contemporary world. Without doubt, the Futurists were instrumental in furthering and expanding the highly influential Cubist breakthrough. Widening the scope of their art by introducing social and political elements and including allied media like photography, they affected the artists associated with Dada and the fantastic on the one hand and Constructivism and geometric abstraction on the other. The esthetic reverberations of Futurism are still felt today in such areas as kinetic and environmental art, as well as performances.

A particular emphasis on the collection has been the basis for this discussion. Alternate possibilities exist; different connections and conclusions may be drawn. The Winston/Malbin Collection offers the viewer, no matter what path is followed, a rewarding insight into twentieth-century art.

Futurism Now

"Bisogna perdonare qualche sbaglio . . . all'uomo che tenta di volare"

"You must pardon the man who seeks to fly . . . if he makes some errors"

Boccioni to Barbantini

Boccioni's impassioned plea, made in 1911, is one of the many moving testimonies to the great struggle which he imposed upon himself in his brief and intense career. In retrospect Boccioni's outcry may also be viewed as a metaphorical appeal for a sympathetic and, more importantly, a balanced assessment of the Futurists' endeavors. For it seems that no twentieth-century creative effort has been subjected to such continuing, highly colored, hence misleading and often incorrect interpretation as Futurism. Such distortions were partly brought on by the Futurists themselves: their overambitiousness, swagger and exaggeration were intended to arouse, astound and offend, and could not but result in a vehement, partisan response. In addition, the movement's equivocal and complex connections with the rise and later triumph of Fascism have further clouded the evaluation of Futurism. And lastly, the very shape of the movement, its efforts to encompass all the arts and even establish a mode of life, has tended to confuse and discourage all but the most persistent of its students. However, the perspective imposed by time has also revealed some of the deeper reasons for the difficulties in comprehending and assessing this Italian contribution to modern art. Factors such as those mentioned above are relatively superficial. It is becoming increasingly apparent that Futurism was not only contradictory, but was more prophetic and daring than had been suspected. And, generally, the Italian movement, in all of its manifestations, emerges as one of the earliest and, above all, most inclusive and vocal expressions of the great creative and moral concerns of our century. These ingredients doubtless have given the Futurist message its continuing appeal.

Turning to some of the better known external aspects of the Italian movement, one notes, for example, that the Futurists' image of themselves as artists, their attitudes towards society and their methods differed markedly from those who preceded them and from most of their contemporaries. Rather than accepting and propagating the comfortable clichés about the artist as a disheveled but proud escapist loner, they were fashionably dressed and appeared easy-going; their projected image was that of energetic and powerful world leaders or industrialists. Quite resolutely they discarded for themselves and the public the nostalgic idea of the artist as a romantic anachronism, like the imaginary artisan of the past. Boldly, if somewhat suicidally, the Futurists faced the fact that in order to put their creative views across they had to employ the methods (and some of the attitudes) of the controlling sectors of society. Their brilliantly planned international and national exhibition, lecture and performance campaigns resemble Henry Ford shaping his empire. For it was with enterprises such as these that the Futurists had to compete for attention from a commodity and consumption-oriented public. Their aggressive and often trying methods were relieved and humanized by the group's youthful high-spirits, which turned all of their activities into hilarious, if irreverent, events. Beneath the din and dust of their uproar there appeared a firm optimism and courage. Italians called them *gli allegri futuristi* (the happy Futurists), for the mood of excitement and expectancy which they created was a welcome change from the pessimism and sensuous self-abandon of some of their elders.

Three of the Futurists during World War I, 1915

Futurism was given its public life and form in 1909 by the poet F. T. Marinetti (1876-1944), who was its leader and catalytic spirit. Quite possibly, Marinetti's most noteworthy contribution to culture, like that of his Russian contemporary Diaghilev, was the successful creation of a unified artistic ensemble, made up of disparate yet temporarily cooperating individuals. To extend the analogy further, it may be said that like Diaghilev's principal dancers, each of the Futurists placed his personal endeavors in the service of an all-encompassing vision and dedicated himself totally to its fulfillment. Yet Marinetti received as much as he gave. An extremely alert and perceptive impresario, he welcomed and thrived, as did the movement, on the lively exchange and collision of ideas within it. However, these differences which ultimately became irreconcilable, led in part to the collapse of the first phase of the movement around 1915.

Futurism achieved an esprit de corps that was both more intense and vocal than, for example, that of the French Impressionists or *Die Brücke* group of Dresden. These other artists had banded together for united strength in order to better pursue creative goals that ran counter to the dominant conventions. But the Italians, from the beginning, demanded a much greater discipline and militancy from themselves and from those they sought to reach. This was expressed in fierce exhortations such as Marinetti's proclamation in his celebrated Futurist Foundation Manifesto of 1909: "We shall sing the love of danger, the habit of energy and fearlessness." Such a mode of life, creative and otherwise, represented, above all, the Futurists' determination to combat the mental, moral and physical lethargy that seemed to have overcome mankind, partly as a result of the greater wealth and ease which the industrial age had brought about. The external complacency and comfort of human existence had reduced the arts to an agreeable, relaxing pastime for "rich and mature men with scornful minds and very bad digestion, which makes all mental effort impossible," in Marinetti's words.¹ The Futurists clearly recognized that the scope of art, as well as the conditions for its creation, had so narrowed as to threaten it with meaninglessness or annihilation. They were by no means the first to note this cultural crisis, in the making for over a century. But with the help of Schopenhauer, Nietzsche, Sorel, Whitman, Jarry and many others, they took the lead in many respects in diagnosing it afresh and in seeking a remedy. And in their fundamental efforts and their willingness to risk all for art, they provided fuel and guidelines for contemporary and subsequent quests for regeneration and liberation of the human spirit.

Today it seems obvious to assert that creation for the Futurists involved an intensely intimate awareness of and identification with the dynamic spirit and forces that the modern scientific and technological era had revealed. Yet what this implied in practice has still not been spelled out fully. What is clear, and cannot be stressed enough, is that it meant much more than "automobilism," as Wyndham Lewis bitinglly characterized the Futurist doctrine in 1914. The realization that the mode of perception of modern life had been as drastically altered as life itself was a significant aspect of the Futurist esthetic; yet it implied more than this. Basically, Futurism stood for an extensive and unsparing questioning of the nature and place of art in the twentieth century, necessary if art were to survive and evolve as a profound human manifestation. The questioning begun by the Futurists aimed beyond the soul-searching of previous generations, which in their estimation had been far too limited. Marinetti's over-quoted slogan from the Foundation Manifesto that "a racing car . . . is more beautiful than the *Victory of Samothrace*" brutally points to the crux of the matter as he saw it: that the tension between the past and present, between dream and reality, or human will and failure, could in the twentieth century no longer be accommodated by the kinds of compromise that all speculative spirits effect in order to create.

It is significant that the *mise au point* of the modern artistic dilemma was posed not by a Frenchman but by an Italian (although a Francophile), and rapidly acted upon by a number of the most gifted and adventurous of his countrymen. Could it have been that such a bare revelation was more

1. *Manifesto dei drammaturghi*, broadsheet dated October 11, 1910, Poesia, Milan

Boccioni in studio, c. 1914, against *Materia*, 1912

readily achieved in Italy? For in the clear, unsparing light of this peninsula all human achievements, artistic, moral and other, dwindle in stature before the ubiquity of its bygone giants. The directness of the Futurists' protest, the extremes to which they went in communicating and fighting this malaise, can perhaps only be grasped fully within this local context. The fact that Italy then believed itself to be behind in cultural and socio-economic matters, and the widespread disillusionment in the aftermath of the *Risorgimento* may further have sharpened the Futurists' insight into the broader predicament of western civilization.

From the beginning, Futurism thus burdened itself with a moral charge similar in weight and urgency to that which fired the medieval artist of the eleventh and twelfth centuries. With analogous, near barbaric force the modern Italians attempted to expurgate the ready-made, meretricious and soothing alibis which filled men's minds and deflected them from the essential issues. And like their predecessors they emphasized that spiritual, hence creative survival could only be assured through war-like vigilance and combat, which Marinetti believed to be the heart of human existence. His exclamation of 1909 that "war is the world's only hygiene," therefore stands for more than a simple-minded, chauvinistic celebration of the actual thrills of battle. However, in his more adolescent, unreflective moments Marinetti was not unreceptive to these superficial sensations.

The widespread and seemingly distorted view that Futurist words preceded deeds should be discussed. This over-simplification has permitted an all too easy dismissal of Futurism as primarily a verbal program rather than an actual, self-contained and meaningful artistic phenomenon. And not surprisingly, such a view has supported the notion of an easy and direct transition from Futurism to Fascism, in which words were indeed one of the most profuse products. Futurism did, of course, burst forth with a seemingly endless number of manifestos, but its basic creative views were the result of prolonged gestation in the work of its guiding figures. But the Futurists' expository statements do raise the difficult and well-worn problem of the relationship of actual creation to its verbal justification. As the century passes and commentaries by artists multiply, providing a seeming permission, even invitation, to transpose one for the other, this problem becomes even more acute. Such curious and deliberate over-intellectualizations, an acerbic comment on the creative anxiety of the present, are ultimately traceable to Futurism. This should not blind us to the fact that the Italians initially composed their verbal statements quite simply for purposes of publicity, public illumination, as well as personal clarification. The need to do this, as suggested earlier, was implied in their efforts to give the arts a central and dramatic place in human existence.

Futurism originated in a literary milieu with a principally literary point of view. Yet it may not be unjust to suggest that its most distinguished and, in a sense, most fulfilled early contributions were made in the visual arts. However, the Futurists' intrepid efforts to break down the borders between the different disciplines resulted in hybrids such as "free-word poetry," "free-word painting," "art of noises," kinetic, multi-material, colored, noise-making "plastic complexes," which, in their day, were radically novel. Hence in any evaluation one must make allowances for the cross-fertilization that, whether obvious or subtle, underlies most Futurist contributions.

What was most important in primarily determining the artistic direction of this closely knit group? Although not acknowledged at first, one of the most fundamental points of agreement among the painters and writers was their awareness of the double-edged thrust of photography and the moving picture as a powerful means of visual communication. The Futurists accepted these new media as direct artistic challenge and inspiration, although, at first, they denied such dependence. Their early detractors, however, had been quick to point out this influence. The Italians understood from the beginning that the survival of their own media was sharply threatened. The dual consequences—the threat and the inspiration—of photography had been recognized and responded to by artists ever since its invention in the second quarter of the nineteenth century. But

the advent of the enormously appealing and popular moving picture seems to have heightened the competitive challenge of the mechanical eye. And Futurism, with its anti-traditional and dynamic esthetic was undoubtedly the first large-scale and consistently worked-out attempt to provide "artistic" counterparts to the mechanically achieved illusion of movement that the photographic lens had revealed. Almost predictably, in 1916 the first phase of Futurism, after considerable internal change, culminated in an effort to transform the "traditionless," esthetically innocent film into an all-embracing, multi-media form of expression. The film *Vita futurista* and the accompanying manifesto of *Futurist Cinematography* testify to the open acceptance of the camera by the movement.

Specific debts to the camera and its related discoveries are clearly discernible in early Futurist works and theory. It must be added that ideas pertaining to optical, psycho-physiological or philosophical aspects of perception almost simultaneously helped to stimulate, rationalize and dignify the Futurists' recourse to the camera. For example, the scientific principles underlying Neo-Impressionism—one of their chief technical points of departure—came to the Futurists' attention through some of its French exponents and apologists and through their Italian counterparts, the Divisionists. Or theories of empathy reached them in such diverse forms as those of Lipps, Berenson, Bergson, and through their socio-artistic elaboration in Romain's *Unanimisme*. Unquestionably, Bergson is an extremely important Futurist source, especially with regard to verbal justifications of their endeavors. For the French philosopher, probably more than any other thinker of the period, was able to translate contemporary spiritual yearnings into evocative metaphors. These provided attractive rubrics for many of the expressed or non-verbalized and often contradictory ideals of the time.

The Futurists' rejection of the conventions of time and space, the experimentation with both analytic and synthetic renditions of motion, and lastly, their quest for a powerful artistic analogue for the universal flux—Bergson's "duration" and Boccioni's "painting of states of mind"—can all, at least in part, be explained as outgrowths of the photographic/cinematic experience. Names famous in the history of photography, especially Marey and his chronophotography, are usually connected with the Futurists' more or less systematic studies of sequential motion, as found, for example, in Severini's *Study for "Portrait of Mme. M.S."* (cat. no. 99). In addition, the even more astounding early trick films with their flashbacks, montages and close-ups, or the X-ray photograph, are very close to the artists' search for an ultimately non-representational symbolic idiom.

All of these catalytic elements led to an early discovery by the Futurists that the static, confined art-object was insufficient for their purposes. From mid-1910, one finds pictorial allusions to and discussions, first, of an art of colored gases and, later, of colored lights which literally envelop the spectator. Talk of such liberated, abstract possibilities was in the air, as witnessed by such famous, roughly contemporary, theatrical projects as Kandinsky's *Der Gelbe Klang* (*The Yellow Sound*), or Gordon Craig's vision of an actorless stage with dramatically lit and moving props. Very likely, the most complete and prophetic early realization of these ideas was accomplished by Balla in his decor of 1917 for Stravinsky's *Feu d'artifice*. This "dancerless ballet," commissioned by Diaghilev, demonstrated theatrically the Futurist desideratum of placing the spectator in the center of the work of art. By means of a time-controlled spatial interaction of sound, moving three-dimensional abstract colored forms and colored lights, which played on and off stage, Balla transformed the entire auditorium into a synesthetic ambience. Balla was the only one among the original Futurist artists able to carry on with the aims of the movement after the group had broken apart. By late 1916 its most forceful member, Boccioni, was dead, and Carrà and Severini had turned away from Futurism.

The Winston/Malbin collection, so sensitively and intelligently assembled, conveys a fine sense of the general course of Futurism and its aftermath. In so doing, it also reveals some of the difficulties

that confront the modern artist, which, not unexpectedly, came newly into focus during the prime years of Futurism. These seem to point to an often unspoken awareness that the discovery and development of alternatives for the western tradition, outworn in their view, pose greater obstacles than anticipated. The technical and mechanical problems arising from the Futurists' wish to supersede the conventional, arrested representational likeness, as well as the isolated static art object were enormous, but not insurmountable. Early in the century, Balla's abstract decor, the work of the Constructivists and the *De Stijl* group variously fulfilled some of these requirements with great conviction and ingenuity. On the other hand, the force of past artistic civilization has proved to be a more stubborn problem, perhaps beyond resolution. The conscious or unconscious dialogue with this seemingly indestructible heritage, which had given human meaning and resonance to earlier creative efforts, has persisted to the present.

It is evident that the critical tension which characterizes the mature Futurism of Boccioni and of most of the other participants was brought to the surface by their contact with Cubism, which began in mid-1911. To Futurist eyes, Cubism as an artistic idiom and social phenomenon represented the kind of creative compromise which they had fiercely rejected as anachronistic; yet, as individuals and on purely artistic grounds, they desired and even envied it. For Cubism, unlike Futurism, was bred and sheltered in a nation with a prized modern tradition and supported by a few informed and wealthy apologists of the "new." Hence its purest masters, Picasso, Braque and Gris, were able to work within an austere circumscribed artistic realm and to update radically some aspects of the classical heritage. Cubism thus remained proudly traditional and hermetic, deliberately sidestepping some of the artistic issues which the optimistic Italians faced.

The Futurists wished, above all, to communicate and to communicate with power. And Boccioni, whose work is as ingenuous as it is ardent, lays bare in his three sculptural masterworks, *Anti-Graceful*, *Development of a Bottle in Space*, *Unique Forms of Continuity in Space* (cat. nos. 28, 29, 30) some of the high ambitions and conflicts of Futurism. This extraordinarily gifted artist identified by natural inclination more closely with the ethos of Futurism than most of the other participants in the movement. Thus, quickly and dramatically, he gave substance to Marinetti's initial precepts, allowing the movement to expand and grow and survive artistically after his death.

On the most immediate level, Boccioni's three sculptures represent spirited attacks on the palatable academic standbys—the portrait, the still life and the monumental figure—with their usually banal conceits alluding to eternal attributes. On a more constructive plane, the sculptures, executed successively in 1912-13, are increasingly searching tests in three dimensions of the persistent interaction of objects with their environment and the mutual transformations that result. In this, they provide a brilliant adaptation and development of some of the analytic and synthetic procedures of Cubism. At the same time, they are also a partial answer to the problem posed by the Futurist belief that the flat surface of a painting had become insufficient for a forceful symbolic expression of the vital continuum. Yet Boccioni's use of a single material, rather than proceeding with his earlier multi-material assemblages, reflects his often-noted realization that he was seeking solutions for too many problems at once. He thus left it for Balla, his Russian contemporaries and their joint heirs to carry on along those lines.

One does not know if and how Boccioni would have wished to have his pieces cast. But the bronze versions by which they are now mostly known, give them a startlingly appropriate old-master look, while, at the same time, underlining their revolutionary quality. This dramatizes the struggle that seems to have been waged in the artist's mind in the course of creating them and which is symbolically communicated. The sculptures express Boccioni's—and by extension, man's—consuming desire to assert his momentary presence in the engulfing stream of change, seeking to shape it and himself to a harmonious concordance. The violent spiritual and material vicissitudes to which

Dr. and Mrs. Barnett Malbin in living room of the Malbin home

the subject, his mother, and sculptural form are subjected in this encounter, shown in *Anti-Graceful*, give way to the highly controlled and calculated, but still undecided contest of the *Bottle*. And finally, a triumphant breakthrough is achieved and proudly proclaimed in the weightless, soaring figure of *Unique Forms*. This metamorphosed multi-image, now motorcyclist-flyer, now flame and wave, possesses the complete formal ease appropriate to its statement. Boccioni has succeeded, as Apollinaire hoped the Cubists would, in "elevat[ing] the melody to a symphony."² Ironically, this breakthrough was accomplished with perhaps some unconscious and certainly grudging concessions to that derided paradigm of past beauty and dynamic action, the *Victory of Samothrace*, as has often been pointed out.³ With it goes the tacit but increasingly pervasive admission, in Boccioni's work after late 1913, that art must draw on art. References to the uncircumventible presence of the classical past, filtered through Cézanne, appear with increasing frequency in his late paintings. Boccioni's acceptance of the seemingly unbreakable chain of tradition becomes tantamount to his recognition, verbalized only shortly before his death, that the wish to achieve an artistic regeneration was great enough a burden for one life.

Marinetti, more resilient and more thoroughly iconoclastic than Boccioni, never went so far as to admit these insights openly. But a similar awareness is implicit in his directives issued to the remaining Futurists during the War. He recommends that they simplify their work to make it comprehensible and fulfill propagandistic purposes. Similarly, Marinetti's growing involvement in the theatrical and cinematic activities of the movement bespeak, in part, his concession that the public and art cannot be served to the same extent at the same time. Yet the discoveries made in these areas, even if rudimentary, attest to the unflagging vitality of the Futurist impulse.

Whereas Cubism, with its narrow but deep commitments, had precipitated the artistic crisis of Futurism, the War pointed up the social one. Futurism, in keeping with its reforming aims, had from the beginning, pretended to a political role, and the actual and increasingly dominant politicizing of the movement that started in 1915, brought its fundamental dilemma to a head. Other idealistic European artistic endeavors experienced a similar trauma at the time. In desperation, some of the German Expressionists and Russian Constructivists, like the Futurists, linked their hopes for worldly fulfillment of their dreams to extremist revolutionary groups. In all instances these political bodies first exploited these artists, but once in power, sooner or later rejected them. For the underlying message of spiritual freedom that such artists brought to real politics threatened the self-propagation of those in power.

Marinetti's seemingly life-long friendship with Mussolini is as difficult to fathom as his acceptance in 1929 of membership in the Italian Academy. Did these acts mean, as is often said, that Marinetti travestied all that Futurism had stood for, and, worse still, that Futurism was one of the many roads to Fascism? In a sense the answer must, of course, be yes. But the condemnation of Futurism as a misguided enterprise does not necessarily follow. Rather it tragically suggests that Marinetti, the "St. John the Baptist of Futurism" in his blind and boundless zeal accepted the temporary death of Futurism in Fascism "much as Christianity was quenched by the Spanish Inquisition or charity by bishops."⁴ This remark was made in 1938 by the English painter and ex-Futurist C.R.W. Nevinson. Yet Futurism lives so long as men dream and "keep alive the primal wonder and curiosity concerning the universe,"⁵ as the keen American critic Christian Brinton had noted two decades earlier.

Works in the Exhibition

The exhibition, *Design in the Twentieth Century*, is divided into three sections, each dealing with a different aspect of design. The first section, *Design in the Twentieth Century*, deals with the history of design from the beginning of the century to the present. The second section, *Design in the Twentieth Century*, deals with the history of design from the beginning of the century to the present. The third section, *Design in the Twentieth Century*, deals with the history of design from the beginning of the century to the present.

Josef Albers b. 1888

Born in Bottrop, Westphalia, Germany. 1913-20 studied art in Berlin, Essen, Munich; subsequently at Bauhaus, Weimar. 1923 became professor at Bauhaus; moved with the school to Dessau and developed *Vorkurs*, an introduction to design based on the study of color, texture, form and line. 1933 upon closing of Bauhaus, moved to United States; headed art department at Black Mountain College, North Carolina to 1949. 1949 beginning of series *Homage to the Square*. To art school, Yale University, 1949; Chairman of Department of Design 1950-58. Author of many books and articles. Now retired from teaching career, works in New Haven.

Upon seeing this work at the joint *Arp-Schwitters* exhibition in Bern in 1956, the Winstons were most anxious to count it among the other objects in their rapidly growing collection. After inquiring about the piece, they found that it belonged to the artist and was not for sale. The sculpture moved them so much however that they telephoned Arp and subsequently went to visit him and Marguerite Hagenbach in Basel. By the end of the visit, they had acquired *Lunar Armor*, having also formed the basis of what was to be a long and deep friendship with the artist and his future wife. According to Marguerite Hagenbach-Arp, this sculpture of her husband's is "a unique original, directly carved in pink limestone [sic] by Jean Arp." (quoted and translated from a letter in French to Lydia Winston Malbin, October 15, 1968.) It is one of the few pieces on which he actually worked himself and which was one of his "anonymous stones."

The upper portion dates from 1938, whereas the lower was
made in 1958. The artist combined the two parts to make a
single sculpture.

Giacomo Balla 1871-1958

Born in Turin. Studied art evenings in Turin. 1895 to Rome which remained center of his activity; worked as illustrator, caricaturist, portrait painter. 1900-01 in Paris for 7 months. Upon return to Rome met Boccioni, Severini, Sironi; taught them Divisionist technique. Signed later editions of two Futurist painting manifestos, 1910; however did not participate importantly in Futurist activities until 1913. Was painter, sculptor, theater and interior designer and playwright. Sustained Futurist impetus longer than other early participants; became leader of later phases of movement. Middle 1930's returned to more figurative style in somewhat Impressionist manner.

Balla has depicted a favorite early motif: the view from his Roman studio in via Parioli (now via Paisiello) onto the row of trees, shown below, which divided his yard from the adjoining meadow of the Villa Borghese that fills most of the canvas. The mysterious and dramatic shadow on the left may have been cast by a wall.

W-17

This finely organized canvas anticipates some important artistic desiderata of Futurism. Its hazardous and uncustomary angle of vision like a vortex draws the spectator into the depths of the picture. Balla's novel viewpoint as well as his exploration of the dynamic potential of lines and shapes were suggested at least in part by photographic experiments. Thus the compelling image of the continuum of motion created by the spiralling steps is an imaginative analogue to the abstract oscillation patterns which Etienne-Jules Marey derived from his chronophotographic images of moving objects. Such abstract schemata were points of departure not only for Balla's Futurist representation of velocity, but also for works such as Boccioni's *Unique Forms of Continuity in Space*.

W-31

In 1915 Balla declared that he had executed "more than twenty paintings" in which he "stud[ied] the speed of automobiles, and in so doing discovered the laws and essential force-lines of speed." He may well have counted this gouache among the group, four of which were illustrated in Boccioni's *Pittura scultura futurista*, published in 1914. Two of these are entitled respectively, *Materiality of Lights + Speed* and *Abstract Velocity*, and this picture seems to be a close variant of the latter. Its terse abstraction provides a lucid ideogram of the interaction of speed, sound, light and dust, attesting to Balla's mastery of this paradigmatic Futurist subject.

Balla's abstract, analytical studies of color date from a trip to Düsseldorf during the winter of 1912. There he began a series of small watercolors in which contrasting or more closely related colors are arranged in patterns made up of variously shaped triangles or segmented circles. At present it is not known when Balla began to consider these abstract studies as the basis for self-sufficient paintings such as the splendid example in the Winston/Malbin Collection. The first oil versions of this theme seem to have been executed for decorative purposes from c. 1913 onward. Balla appears not to have dared or cared to exhibit these significant experiments until the 1950's when the evolution of abstract art was newly reconsidered.

This is one of several studies related to two larger versions of the subject: one is in the collection of Dr. Gianni Mattioli, Milan, the other in the Museum des 20. Jahrhunderts, Vienna. Very possibly the partial eclipse of the sun of November 7th, 1914, provided the impetus for this series.

W-14

A related graphic motif of Boccioni's *Fist* appeared on the front page of *Italia Futurista* of August 25th, 1916, which was dedicated to Boccioni who had died eight days earlier. This dynamic design may originally have been intended as a letterhead for the Futurist movement, and was used as such subsequently. It may have been conceived in 1915. The translation of the motif into three dimensions is consonant with the notion of "plastic complexes" as explained in Balla and Depero's manifesto *The Futurist Reconstruction of the Universe* of March 1915. The sculpture illustrated there (now lost), as well as Balla's set for Diaghilev's 1917 production of *Feu d'artifice*, made up of moving, abstract colored complexes, suggest that Boccioni's *Fist* may well have been executed during these years.

20. GIACOMO BALLA

Crowd and Landscape (Follo + Paesaggio; Paesaggio Folle Patriottiche). 1915?

Collage on paper, 60 x 26 1/4"

l.c. "BALLA FUTURISTA/1915"

Wescher, Herta, *Collage*, Abrams, New York, 1968, pl. 52,
p. 403

W-21

Balla created this collage expressly for Marinetti to cover the mirror of his wardrobe because its reflections bothered the Futurist leader, who was ill at the time. Two other versions of this collage exist. The flat figure-eight has recently been interpreted as the emblem of the House of Savoy, the ruling Italian dynasty, thus representing a possible allusion to the vehement debate that raged in 1915 between the pro-intervention king and the anti-intervention government. On stylistic grounds, however, a date of c. 1918 would seem to be indicated; this is supported by the fact that Marinetti, who was injured at the front in 1917, was still convalescing in 1918.

21. GIACOMO BALLA

Futurist Necktie (Cravatta futurista). c. 1916

Watercolor, gouache and pencil on paper, 5 x 6 1/8"

u.c. "No. 10 CRAVATTA FUTURISTA/ BALLA"

PROVENANCE:

Rose Fried Gallery, New York

Winston Collection, 1954

REFERENCE:

Dorazio, *Balla*, 1970, no. 195. Balla shown wearing one of his neckties, 1925

W-236

Balla frequently wore Futurist outfits, as described in his manifesto *Anti-neutral Clothing* (cat. no. 242), and his ties especially caused sensations. Later accounts, perhaps somewhat embroidered, include Marinetti's story of Balla's painted and sugared metal ties. And the architect Virgilio Marchi recalls that the technical failures of the 1917 premiere of Balla's set for *Feu d'artifice* were counteracted by the artist's appearance on stage with a tie that had blinking lights.

22. GIACOMO BALLA

Path of a Gunshot (Colpo di fucile). c. 1918

Oil on canvas, 14 $\frac{1}{4}$ x 17 $\frac{3}{4}$ "

D.I.A., 1957-58, no. 11, ill. p. 35. Did not travel

REFERENCE:

Mellquist, *XXe Siècle*, 1958, ill., n.p.

W-27

This is a pictorial representation of a noise perceived at great velocity. In October 1918, Balla exhibited a number of works with the title *Colpo di fucile domenicale (Path of a Sunday Gunshot)* at the Casa d'Arte Bragaglia, Rome, but it is difficult to ascertain whether this painting was included. Very possibly Balla alludes in this series to the revolutionary political activities of the Futurists at the time.

23. GIACOMO BALLA

W-23

The vitalizing effect of Futurism with its explosive and gay atmosphere is suggested in this painting. Just off center to the right Balla shows Marinetti in characteristic declamatory poses, wearing a red and green Futurist outfit in accordance with Balla's 1914 manifesto, *Anti-neutral Clothing*. The large encircled eye on the left, the two oval forms within the leftward moving arrow, as well as the "abstract" shapes on the right refer to the beautiful Marchesa Casati whose celebrated literary and artistic salon in Rome seems to have inspired this picture. Balla's lost relief portrait of the Marchesa, which apparently had moving parts, contained similar individualizing features (illustrated in *Archivi del futurismo*, vol. 2, no. 216, ill. p. 115).

G-178

Maria Blanchard 1881-1932

Born in Santander, Spain. 1906 went to Paris; Andre Lhôte introduced her to Cubist painters. 1913 returned to Spain. 1916 settled in Paris; established close contacts with Gris, Metzinger, Lipchitz and Rivera. Works emphasize contours of forms with freely modeled surfaces; style is geometric but never totally abstract. 1919 work became more realistic, though Cubist structure retained. Portrayed men and women in scenes from daily life and solitary children. Palette of earth colors heightens melancholic feeling. Died in Paris.

25. MARIA BLANCHARD

Umberto Boccioni 1882-1916

Born in Reggio Calabria. 1897 completed studies at Istituto Tecnico, Catania; moved to Rome c. 1900. 1901 with Severini worked in Balla's studio. Travelled extensively in Italy; 1906, 1908 visited Paris; 1906 to Russia. Late 1907 settled in Milan. With help of Carrà and Russolo wrote two Futurist painting manifestos, 1910. Became the leading figure and spokesman of Futurists' artists' wing; numerous influential theoretical writings. *Pittura, scultura futuriste (dinamismo plastico)*, published 1914. From 1911-12 created important sculpture. By late 1913 had begun to turn toward Cézanne. Enlisted and fought at front with other Futurists, killed during cavalry exercises in Verona.

W-22

A date of 1914 has frequently been given to this powerful work, but both the subject and its interpretation suggest an earlier execution, probably during the summer of 1911. The theme of a worker is thus directly related to Boccioni's hymn to labor, *The City Rises* of 1910-11 at The Museum of Modern Art, New York. He did not return to this subject in later years. Furthermore, the multiple image of one man seen from different points of view is an early attempt at presenting an image of continuing motion that was subsequently rejected in favor of a more synthetic form. Lastly, the still hesitant and superficial allusions to Cubism found here, suggest that only a second-hand knowledge of this approach was available to Boccioni at the time. Nonetheless, these vigorous street pavers with their sharp, angular movements and clanking sounds are worthy younger brothers of Courbet's *Stone Breakers* of 1849, which he may well have seen at the 1910 Venice Biennale.

Boccioni's mother, like Cézanne's patient wife, was the
model and point of departure for many of his most searching
efforts. She was the sitter for at least one other sculpture, the
destroyed half-length *Testa + casa + luce* (*Head + House
+ Light*) of 1912, and for numerous paintings, drawings,
and prints, as shown by the many examples in this collection.
This is the only cast from the original plaster now in the
Galleria Nazionale d'Arte Moderna, Rome. It was made in
1950-51 by Fratelli Perego, Fonderia Artistica, Milan.

W-24

The theme of the strenuously active, moving figure engaged Boccioni's best efforts during the peak years of his career. A series of monumental paintings, drawings, and four sculptures reveal his consuming desire to give new life to the ancient subject of the nude, which in 1910 was banned for ten years from the Futurist vocabulary. This is the fourth and final of the sculpted striding figures. The other three, indicative of the rigorous self-criticism to which he subjected his work, were destroyed after his death. (*Archivi del futurismo*, vol. 2, nos. 328-331, ill. p. 232)

Four bronze castings were made from the original plaster, now in the collection of the Museu de Arte Contemporânea de São Paulo: two in 1931 by Gaetano Chiurazzi, Rome, now in the Civica Galleria d'Arte Moderna, Milan, and The

Museum of Modern Art, New York, and two in 1949 by Giovanni and Angelo Nicci, Rome, now in this collection and that of Paolo Marinotti, Milan. The earlier edition did not include the flat double base of the original plaster.

In 1972 the Galleria La Medusa, Rome, commissioned a further edition of eight bronze casts, but it is not known whether they were taken from the earlier editions or, more unlikely, from the original plaster. Another cast is in the collection of Dr. Gianni Mattioli, Milan.

Boccioni's early evolution, unlike that of most other major artists, lacked exposure to Cézanne and African sculpture. A meaningful encounter with both occurred only during the climactic years of Futurism. This collage is a singularly frank, if anxious, statement of Boccioni's creative process. The artist is trying to appropriate a Cézannian content as well as Picasso's "Africanized" interpretation of Cézanne's space and form, while seeking to imbue both with some Futurist meaning.

The painting to which this work is related is in the collection of Dr. Riccardo Jucker, Milan.

W-127

This bronze, according to Sidney Geist, is one of two after The Art Institute of Chicago's marble *White Negress II* of 1928. Although the artist said 1926 was its date, Geist, based on stylistic analysis and studies of Brancusi's casting procedures, dates it 1933. Brancusi sometimes gave all versions of one sculpture the same date, using the earliest date to represent the conception of the idea.

Georges Braque 1882-1963

Born in Argenteuil, France. Began career as apprentice house painter. Studied Ecole des Beaux Arts, Le Havre and Paris until 1904. 1907 exhibited as Fauve in *Salon des Indépendants*. 1908 discarded Fauve palette in favor of Cubist color and geometry. 1909 established Cubist style with Picasso. Fought in World War I, received a head wound. By 1922 paintings returned to nature retaining only certain aspects of Cubism. 1933 first important retrospective in Basel. Worked in isolation throughout the War, 1948 published *Cahiers de Georges Braque: 1917-47*. 1948 first prize Venice Biennale. 1948-49 major exhibition The Museum of Modern Art and Cleveland Museum. From late 50's until his death, he continued to work in seclusion despite failing health.

Cooper dates the painting 1914 (*The Cubist Epoch*, no. 33, p. 278), which is earlier than the frequently cited 1915-16; the latter is certainly less likely since Braque was severely wounded in 1915 and did not resume painting until 1917. Since the artist had introduced a pointillist technique into his general style by 1913-14, the earlier date is further substantiated.

Alexander Calder b. 1898

Born in Philadelphia. 1919 graduated as mechanical engineer from Stevens Institute of Technology in Hoboken, New Jersey. 1922 began studies at Art Students' League, New York. 1926 travelled to Paris; created circus figures, animated toys and wire sculpture. 1927 first one-man exhibition Weyhe Gallery, New York; began to divide his time between United States and France. 1930 after visit to Mondrian's studio in Paris, turned to abstraction. First abstract sculpture christened "stables" by Arp; later Marcel Duchamp called his moving sculptures "mobiles." Lives in Roxbury, Connecticut and Saché, France.

This work was made especially for the Winston's stairwell by Calder, although he never saw the location. As a consequence, a great deal of correspondence took place between the Winstons and the artist in a mutual effort to describe and understand the problems of space which were involved in the undertaking.

Carlo Carrà 1881-1966

Born in Quargnento, Piedmont. Trained as mural decorator; 1895 to Milan. Worked on decorations for International Exposition, Paris, 1900. 1905-09 studied at Brera Academy. Around 1908 friendship with Boccioni; formulated Futurist painting manifestos of 1910 with him. More drawn to Cubism than other Milanese Futurists were. Many contributions to literature of Futurism, most notably *Guerrapittura*, 1915. 1916 or 17 met de Chirico; joined with him in "metaphysical painting." Subsequent work marked by mixture of primitivism and classicism and rejection of dynamism of Futurist painting. 1920's association with *Novecento* group of figurative painters. Died in Milan.

W-39

This handsome collage, like some of the other illustrations in *Guerrapittura*, conveys Carrà's estrangement from Futurism and predicts both Dada and the enigmatic and calm imagery of his metaphysical painting of 1917 onward. Purportedly evoking the most extreme Futurist moment of actual war, Carrà has given the thrusts and shouts of combat a dream-like distance and paradoxical meaning. His forms are more precise and solid, and suggest that the dynamic dispersion of the Futurist esthetic no longer seems to apply.

Robert Delaunay 1885-1941

Born in Paris, 1902 apprenticed to set designer Ronsin. 1904 first paintings, influenced by Impressionists and Pont-Aven group; exhibited at *Salon d'Automne* and *Salon des Indépendents*. Studied color theories of Chevreul. Friendship with Rousseau, Metzinger. 1910 married painter Sonia Terck; showed at first *Blanc Reiter* exhibition, Munich. 1910-11 met Apollinaire and Gleizes; Cubist period. 1912 Apollinaire coined term *Orphisme* to describe Delaunay's personal idiom emphasizing color, light and motion. 1912 "constructive" period, characterized by works organized through colored planes and their "simultaneous contrasts"; series of paintings of chromatically dissected circular forms, among best known works. Continued emphasis on color, light and motion in figurative works of 20's and abstract paintings of 30's.

Theo van Doesburg 1883-1931

Born C.E.M. Küpper in Utrecht. 1899 began painting. 1908 first shown at The Hague. 1917 founded *De Stijl* periodical whose contributors, Mondrian, Oud, Wils, Bart van der Leek, Vantongerloo, formed the *De Stijl* movement which stressed the need for abstraction and simplification, producing compositions based on geometric figures and primary colors. After 1917 propagandized for *De Stijl* in Belgium, France, Italy, Spain, Czechoslovakia and Germany. Lectured at Bauhaus. Friendship with Schwitters led to interest in Dada; wrote poems under pseudonym I.K. Bonset. 1926 published *Manifesto of Elementarism* broadening the principles of *De Stijl*.

Paul Feeley 1910-1966

Born in Des Moines, Iowa. 1922 began studying painting, Palo Alto, California. 1931 moved to New York; studied at Art Students' League; joined Mural Painters Society of New York. Supported himself by decorating restaurants, hotels and nightclubs. 1935 teacher at Cooper Union Art School. 1939-43 teacher at Bennington College in Vermont. 1943-46 served in Marine Corps. 1946 returned to Bennington where he taught until his death. 1951 contact with American avant-garde art. Style developed toward abstraction with an emphasis on color. Simple shapes create highly equivocal relationships between figure and ground. 1955 first major exhibit in New York at Tibor de Nagy Gallery. Died in New York. 1968 Memorial Exhibition, Guggenheim Museum, New York.

Otto Freundlich 1878-1943

Born in Stolp, Pomerania, Germany. 1903 studied art history, Berlin and Munich. 1907-08 studied art, Berlin. 1908-09 Paris, studio at "Bateau Lavoir." 1910-13 exhibited in Paris, Berlin, Düsseldorf, Amsterdam. Hospital attendant in Cologne during World War I. 1914-18 worked on journal *Action*; member *November Group* under leadership of Pechstein, which believed in unity of arts, architecture and city planning under socialist state. 1924 returned to Paris. 1932 member *Abstraction-Création*. Participated in numerous European exhibitions. Art declared degenerate by Nazis. Persecution by Nazis; died in concentration camp.

Albert Gleizes 1881-1953

Born in Paris. Served as apprentice in his father's textile design studio. 1902 exhibited pointillist paintings at *Société Nationale des Beaux Arts*. 1906-08 became involved with Utopian Socialism and founded a free university and community of artists and writers, L'Abbaye de Créteil. 1911 arrived at own Cubist idiom. 1912 collaborated with Metzinger on treatise *Du Cubisme*. 1915, 1917-18 visited New York. Paintings of 1920's reveal his search for metaphysical principles of reality. Mid 1930's began lyrical abstraction of late style. Died in Avignon.

Auguste Herbin 1882-1960

Born in Quiévy, France. 1898-1901 Ecole des Beaux Arts, Lille. 1901 moved to Paris. 1905 exhibited Impressionist paintings at *Salon des Indépendents*. 1909 moved to "Bateau Lavoir" near Picasso, Braque and Gris. By 1913 was painting in Cubist style. By 1918 had rejected the object and was painting abstractions based on his personal pictorial language of color and form. 1931 co-founder with Vantongerloo of *Abstraction-Création* group. 1940's invented his "plastic alphabet." 1949 published his theories of color and form *L'art non-figuratif non-objectif*; founded *Salon des Réalités Nouvelles* where he exhibited until his death.

Vasily Kandinsky 1866-1944

Born in Moscow. 1892 law degree University of Moscow. 1896 went to Munich to become a painter. 1901 founded *Phalanx* group. 1909 settled in Murnau, organized *Neue Künstlervereinigung*. 1910 wrote *On the Spiritual in Art* in which he conceived of color and form as sole content of painting. 1911 founded *Blaue Reiter* group with Franz Marc. 1917 returned to Russia; married his second wife Nina; teacher and administrator of the arts until government hostility forced him to leave. 1922 accepted post at Weimar Bauhaus; 1926 Dessau Bauhaus; 1933 settled in Paris after Nazis closed Bauhaus. Developed non-objective style in Munich. During Bauhaus period utilized geometric forms. In Paris years incorporated biomorphic forms of Miró and Arp in his work.

G-163

Henri Laurens 1881-1954

Born in Paris. Self-taught. Early influence of Rodin. 1904-10 studio in "Bateau Lavoir." 1911 formed life-long friendship with Braque. 1913 exhibited at *Salon des Indépendants*. 1915 began Cubist still-life constructions influenced by Picasso. 1915-18 *papiers collés*. 1918 began direct carving in stone and plaster modeling. Utilized technique of faceting and hollowing out, derived from Analytic Cubist painting style. After 1920 more conventional treatment of wood and stone. Around 1925 style, though still grounded in Cubism, became more organic. Exhibited at World's Fair, Paris, 1937. Female nudes his constant theme. Attenuated forms typical of work of 30's; massive, organic volumes mark sculpture of 40's. São Paulo Bienal 1953, awarded sculpture prize.

Stanton MacDonald-Wright 1890-1973

Born Charlottesville, Virginia. 1904-05 studied at Art Students' League, Los Angeles. 1907 to Paris to study art. Met Morgan Russell c. 1910. Studied color with Tudor-Hart, read color theories of Chevreul. Devised Synchronomy, which emphasized color in reaction to monochromatic Cubism. First Synchronist exhibition *Neue Kunst Salon*, Munich, 1913. 1916-18 lived in New York, exhibited at Steiglitz' 291. 1919 produced first full-length stop motion color film. Developed color process for movies. 1920 interest in Oriental philosophies; 1924 returned to representation under influence of Chinese painting. Active as teacher and writer. From 1954 both non-objective and figurative work. Repeated visits to Orient. Lived in California and Tokyo.

Although this painting has often been dated c. 1914, the 1916-17 date attributed to it by William Agee seems more probable. (Agee, Knoedler catalogue, 1965, p. 51) It is a smaller version of the very similar 1916 painting formerly in the collection of Earl L. Stendahl, Hollywood, California, (current whereabouts unknown); that fact alone increases the likelihood of the accuracy of the later date.

André Masson b. 1896

Born in Balagny, France. Studied art at Académie Royale des Beaux Arts, Brussels; 1912 at Ecole des Beaux Arts, Paris under Baudouin. 1917 wounded in World War I severely, psychologically as well as physically. Paintings of early 20's influenced by Cubism. Among the first Surrealists. 1925 regularly contributed automatic drawings to *La Révolution Surréaliste*. 1934-36 lived in Spain. Late 30's turned to figurative Surrealism influenced by Picasso. 1941-45 to United States; this period marked by automatist, expressionist approach. Returned to France 1945, painted in more expressionist manner. Throughout career created many scenic designs. Important in linking American Abstract Expressionism and European Surrealism.

Henri Matisse 1869-1954

Born at Le Cateau, France. Studied law 1887-88. 1892 studied at Académie Julian, Paris, under Bouguereau and Ferrier; 1893 at Ecole des Beaux Arts, Paris, under Moreau. 1893 visited Provence and came under influence of Cézanne. 1899 worked at atelier of Carrière; began experiments in sculpture. Although primarily a painter, continued to sculpt throughout his career, influential as a sculptor. 1904 after brief Pointillist period turned to use of pure, flat color. 1905, with Derain, Marquet, Vlaminck and others, formed *Fauve* group, notable for use of brilliant, arbitrary color and direct brushwork. 1911-13 visits to Morocco: oriental color influence, exotic landscapes. 1913 influence of Cubism. 1917 settled in Nice. Early 1920's period of *Odalisques* marked by use of sensuous color and pattern; strong three-dimensionality in 1920's. 1930 travelled in Europe, Russia, Oceania, United States where he painted murals for Dr. Barnes. 1930's characterized by linearism. 1936 retrospectives, Paris, New York, Stockholm. 1939 settled in Vence, produced many collages. 1949 began decoration of Dominican Chapel, Vence. 1950's numerous compositions of colored, cut paper.

Jean Metzinger 1883-1956

Born in Nantes. 1898 began to paint; settled in Paris; attended many academies but was dissatisfied with all of them. 1903-08 work influenced first by Neo-Impressionists, then Fauves. 1909 exhibited at *Salon des Indépendants* and with the *Section d'Or*. 1912 published *Du Cubisme* with Albert Gleizes, first theoretical work on the movement. Continued to work in the Cubist idiom until his death.

W-151

Joan Miró b. 1893

Born in Barcelona. 1907-15 intermittent attendance at various art schools. 1918 first one-man exhibition, Barcelona. 1920 moved to Paris, summered at parents' farm in Montroig, Spain. 1920 first participation in Dada activities. Joined Surrealist group 1924. 1925 major one-man exhibition Galerie Pierre, Paris. Use of imaginary and dream imagery encouraged by friendship with Arp and Masson and acquaintance with Klee's work. Around 1940 more rhythmically patterned compositions appeared; 1950's and 60's a gestural idiom of expressive calligraphy developed; 1950's more concentrated work in ceramics and sculpture. Resides in Palma de Mallorca.

According to Dupin, this canvas and a very similar one of the same year, *Three Personages* (or *The Fratellini*) in the Gallatin Collection of the Philadelphia Museum of Art, are "good examples of Miró's most subjective vein of humor." (p. 166) He also explains that Miró gave precise titles to only a few of his paintings, preferring to designate them merely as *Peinture* or *Painting*. Apparently neither of these two works were given the Fratellini title by the artist. Undoubtedly it was someone in Miró's circle at the time—possibly one of the Surrealist poets like Robert Desnos or Paul Eluard—who gave the painting this title. Fratellini refers to the family of circus acrobats and clowns who were very popular in Paris at that time; the title seems appropriate in terms of several other works he made that year which evolved around a circus theme.

Piet Mondrian 1872-1944

Born in Amersfoort, The Netherlands. 1892-97 studied at Amsterdam Academy of Fine Arts. 1911 saw Cubist works by Braque and Picasso. 1912 moved to Paris. By 1913 style had developed beyond Cubism to a more radical abstraction. Detained in The Netherlands during World War I. 1917 arrived at mature style of vertical and horizontal dissecting lines and flat color planes. 1919 contributed essays to first issue of *De Stijl* periodical; 1918 signed *De Stijl* manifesto. 1919 returned to Paris. 1930 exhibited with *Cercle et Carré*. 1931 joined *Abstraction-Création* group. 1938 World War II forced him to London. 1940 moved to New York. Influenced by the vitality of New York and began to develop more dynamic, less classical style.

Eduardo Paolozzi b. 1924

Born in Edinburgh, Scotland. 1943 studied at Edinburgh
College of Art; 1944 Slade School of Art, London. 1947 first
one-man exhibition at Mayer Gallery, London. 1947-50
worked in Paris. Exhibited work at Galerie Maeght with
group *Les mains éblouie*. Influenced by Dada and Surrealism.
Sculptures present anguished images of modern man, using
cast-off objects assembled within a human framework. 1950
began work in graphics. 1950-54 worked on several architec-
tural projects. 1955-58 taught at St. Martin's School of Art,
London. Work after 1961 composed of simply structured
monumental components, assembled with technological
precision.

Although this landscape has often been dated 1908, William Camfield has dated it c. 1912 on stylistic grounds. (See Guggenheim Museum *Picabia* catalogue cited above.)

Francis Picabia 1879-1953

Born in Paris of Spanish father and French mother. 1895 entered Ecole des Arts Décoratifs, Paris. Painted in Impressionist style. 1909 began to work in manners related to Fauvism, Cubism, and Abstract art. 1911 met Marcel Duchamp and joined the Puteaux group which became *Section d'Or*. 1913 came to United States for the Armory Show. One-man exhibition at 291, New York, 1913. 1915 beginning of machinist or mecanomorphic period in which he made imaginary living machines. 1916-21 participated in Dada manifestations and contributed to Dada publications. After 1927 showed in Paris Salons with Surrealists. 1933-39 worked in a variety of styles: simplified naturalistic figures as well as landscapes in Impressionist and Fauvist manners. Retrospective at Galerie René Drouin, 1949. Died in Paris.

Pablo Picasso 1881-1973

Born in Malaga, Spain. 1891 studied at Da Guarda School of Arts and Industries where father taught. 1895 to Barcelona, entered art school there. 1900 first trip to Paris. 1904 settled in Paris, studio in "Bateau Lavoir." 1901-04 Blue Period; 1904-06 Rose Period. Association with Steins at this time. 1907 influence of African and Iberian art. 1908 association with Braque; with him evolved Analytic, Synthetic Cubism and collage. 1920's neo-classic period. 1925 through 30's marginal Surrealism. 1929-30 produced many sculptures. Late 30's monochromatic and diagrammatic style of *Guernica*. Spent War years in Paris; refused to return to Spain during Franco regime. Intense activity in ceramics and lithography after War. 1948 moved to south of France. Late 40's-50's paintings more loosely constructed. 1963 opening of Picasso Museum, Barcelona. Series of erotic works 1969-70. 1971 major exhibition at Museum of Modern Art, New York, on 90th birthday.

Jackson Pollock 1912-1956

Born in Cody, Wyoming. Studied painting at Manual Arts High School, Los Angeles. 1929 studied with Thomas Hart Benton, Art Students' League, New York. 1935 settled in New York. 1938-42 worked on Federal Arts Project. 1943 first one-man show at Peggy Guggenheim's Art of This Century gallery. Before 1947 painted in Surrealist idiom using mythical or totemic figures. 1947 first paintings in mature style using drip technique on unprimed canvas. 1950 exhibited at 25th Venice Biennale; was shown extensively in United States and Europe subsequently. 1956 killed in automobile accident.

This painting is a fine example of Pollock's style before the post-1947 "drip" work for which he is best known. Clearly he was already preoccupied with a technique incorporating a form of random dripping. Lydia Malbin responded at once to the picture upon seeing it in 1946 at Peggy Guggenheim's gallery, where she had been looking for an André Masson. Pollock's work was completely new to her, but she felt an overwhelming strength in it. She thought there was an affinity between Pollock's largely automatic approach and Masson's automatism. She has speculated on the possible correspondence between the glazed surfaces of her own ceramics and Pollock's surface quality. This painting was the first Pollock purchased by a private collector.

Medardo Rosso 1858-1928

Born in Turin. 1870 to Milan. Drawn to Milanese *Scapigliatura* group. 1882 enrolled in Brera Academy, Milan; expelled 1883. 1884 to Paris, assistant briefly to Dalou; met Rodin. 1886-89 showed at Paris *Salon* and *Salon des Indépendants*. 1900 met Etha Fles who became his patroness. Achieved renown in France and Northern Europe. One man shows: 1904 *Salon d'Automne*, Paris; 1905 Vienna; 1906 London. His concepts derived partially from Impressionism and Symbolism. Greatly admired by Italian Futurists for his rendering of interaction of environment and subject. 1910 first one-man exhibition in Florence; subsequent recognition in Italy aided by Futurist support.

87. MEDARDO ROSSO

Man in the Hospital (*Malade à l'hôpital; Malato all'ospedale; Dopo la visita*). 1889

W-216

While a patient at Lariboisière Hospital in Paris, Rosso was struck by a sick old man in an armchair who subsequently inspired this profound image of mute resignation. According to Etha Fles and Rosso, this piece provided leading suggestions for Rodin's *Monument to Balzac*. Rosso cast this bronze in Paris.

88. MEDARDO ROSSO

Jewish Boy (*Enfant juif; Bimbo ebreo*). 1892

Rosso, so bent on capturing the transitory and the fragile, understandably was drawn to children as subjects for his art. He subtly suggests their vulnerability, intimate dependence upon their surroundings and their undeveloped individual potential. Rosso claimed that this sculpture was a likeness of the young Baron Rothschild.

This piece, *Man in the Hospital* and *Jewish Boy* were among Rosso's favorite works. In these he believed he had succeeded in transmitting "the emotion, the unification of light, space and air." It is a commissioned portrait of Alfred William Mond, child of Emile Mond of London. Rosso has recorded the boy's sudden appearance from behind a curtain at a large reception in his parents' house. In explanation of the title, Rosso said: "Voilà la vision de pureté dans un monde banal." *Ecce Puer* is the only piece of sculpture Rosso completed during the last quarter of his life.

W-126

Morgan Russell 1886-1953

Born in New York. Studied at Art Students' League, New York with Robert Henri, 1906-07. 1909 to Paris, knew Matisse, Leo Stein among others. 1912 developed Synchromism in collaboration with MacDonald-Wright, in which pure color was explored. Influence of Orphism, Delaunay and Kupka important. First Synchromist exhibitions 1913 Munich and Paris; included in Armory Show, New York. After 1920 returned to figurative work. Died in Broomall, Pennsylvania.

William Agee dates the painting 1913 and titles it *Synchromie en bleu-violacé* (*Synchromy to Light*), in spite of the inscription on the reverse which was probably not written by the artist. Agee considers it and its sketch (Collection Los Angeles County Museum of Art) to be Russell's first completely abstract paintings, which must have been done in the summer of 1913. "This painting and the sketch originally carried the French titles, coming to be known as *Synchromy to Light* by virtue of the passage from Genesis following the title in the Catalogue of the Bernheim-Jeune exhibition: '*Alors Dieu dit: Que la lumière soit! et la lumière fut . . .*' The painting was dedicated to Mrs. Harry Payne Whitney, Russell's benefactress and patron from 1908 to 1915. It is probable that this painting is a later, although identical, version completed in the early twenties when Russell had returned to his abstract *Synchromies*." (Agee, Knoedler catalogue, 1965, p. 52) Russell himself described this painting: "There is no subject in the ordinary sense . . . Its subject is the *bleu-foncé* evolving according to the particular form of my canvas." (Bernheim-Jeune catalogue, 1913, as quoted from Agee, Knoedler catalogue, p. 52.)

Luigi Russolo 1885-1947

Born in Portogruaro, near Venice. 1901 to Milan; trained as a musician, largely self-taught as an artist. Signed Futurist painting manifestos, 1910. Participated actively in movement as painter until 1913. From 1913 experiments with Art of Noises, concerning which he wrote important manifesto. With painter Ugo Piatti constructed noise producing machines, *Intonarumori*; 1913-14 gave performances on them in Italy and England. Participated in later phase of Futurism, but spent more time in elaborating music than painting. After 1930 interest in mysticism and Yoga reflected in book *Al di là della materia*, 1938. 1940's returned to painting, but in simple, figurative style.

The synesthetic tendencies which Futurism had inherited from the 19th-century Italian *scapigliatura* and from Symbolism are expressed in this lovely painting. Russolo has created a visual correspondence for non-visual sensations. Form, color and light are arranged to simulate olfactory—and more remotely—auditory sensations and their development in time. The ultra-femininity of this picture has still more in common with the d'Annunzian celebration of the eternal feminine than with the Futurist scorn for women.

Kurt Schwitters 1887-1948

Born in Hanover. 1909-14 studied in Dresden and Berlin. 1918 began experimenting with collage; exhibition at *Der Sturm* Gallery, Berlin. 1919 formulated concept of MERZ, permitting the use of any and all materials for collages and paintings with collage elements. Throughout 1920's created a construction which he called *Merzbau* and which grew to fill his home. Considered as a Dada artist although his works combine Cubist structure with Dada viewpoint. 1923-32 published *Merz* magazine. 1937-40 lived in Norway where he began another *Merzbau*. 1941 moved to England and started a third *Merzbau*.

Gino Severini 1883-1966

Born in Cortona, Italy. 1899 to Rome, attended life drawing classes. 1901 met Boccioni and Balla. 1906 settled in Paris; associated with avant-garde there. Signed both Futurist painting manifestos. The most Paris-oriented of the Futurists, mid-1911 moved into closer contact with Milanese Futurists whom he familiarized with Parisian developments. 1915-16 turned more toward Cubism and figurative classicism. 1917 one-man exhibition at Stieglitz Gallery, New York. 1921 important treatise, *Du Cubisme au classicisme*. From 1922 executed many murals. 1940-42 theater décor and costumes. Lived most of his life in Paris, where he died.

Madame M.S. was the wife of Mr. R. R. Meyer-See, formerly manager to Martin Henry Colnaghi, then joint founder and director of the Sackville Gallery and subsequently owner of the Marlborough Gallery, London. Severini had his first one-man show at the Marlborough Gallery in April 1913, but neither this drawing, nor the related painting (Art Gallery of Ontario, Toronto) were exhibited then.

Severini's wife is the daughter of the poet Paul Fort, and this graceful likeness was painted during the months preceding their marriage which took place on August 28, 1913. Although his Futurist colleagues disapproved of Severini's bow to convention, Apollinaire, Merrill, and Marinetti, who arrived from Milan in an appropriate white automobile, were among the witnesses.

During the winter and spring of 1913, while recuperating from a severe illness at Anzio, Severini worked on a number of pictures which he called "plastic analogies." *Sea = Dancer* exemplifies stunningly the kind of association of object-situations that was also described in his contemporary but unpublished manifesto. He writes, "the sea with its dance on the spot (*al posto*), its zig-zag movements and scintillating contrasts of silver and emerald, in my plastic sensibility evokes the far off vision of a dancer covered with sparkling paillettes in her surroundings of light, noises, and sounds." (*Archivi del futurismo*, vol. 1, p. 78)

Sea = Dancer was the first Futurist work to enter the Winston/Malbin Collection.

G-164

After 1914 Severini began to withdraw from Futurism. Somewhat unexpectedly, therefore, this gentle artist, who endured most of the war in his Paris flat, in 1915 produced a striking series of war paintings. The figure shown here is related in concept to those found in the masterful *Armored Train*, 1915, Collection Mr. Richard S. Zeisler, New York. But Piero Pacini and Joan M. Lukach agree that it is preparatory for another unexecuted work in the same group.

G-8

Severini executed a number of fastidiously organized collages with corrugated cardboard such as this one. These have posed considerable problems in dating and are usually assigned to the years of 1912 or 1913 on the basis of dated references within the work. The *Lacerba* page of March 15, 1913 with Papini's provocative heading "*Contro il futurismo*," found here, could thus be taken as a humorous, contemporary reference to Severini's role in bringing the Florentine writer and his *La Voce* friends into the Futurist fold in 1913. But on stylistic and intellectual grounds the dialogue between Cubism and Futurism suggested in this calm collage is much closer to Severini's approach of 1915 and after. Back in Paris after a prolonged stay in Italy and in close touch with Braque, Picasso and Gris, Severini gradually turned to Cubism. In 1916 Léonce Rosenberg became his dealer and no doubt favored and encouraged the dominantly Cubist control which is found in this collage.

W-28

The ambivalence of Sironi's loyalties is brought out in this strong, rhythmic drawing. On one hand, the artist leans toward a Cézanne-inspired analysis of solid form similar to that pursued by Léger. On the other, he seeks to suggest in these quasi-automata, the Futurist continuum of motion. Yet the subtle chiaroscuro of this drawing evokes the moonlit unreality of a proto-Dada or *Pittura Metafisica* nightmare.

Mario Sironi 1885-1961

Born in Tempio Pausania, Sardinia. To Rome to study mathematics at University, met Severini and Boccioni with whom he visited Balla's studio; decided to become an artist. 1914 first exhibited in Futurist-sponsored show in Rome. Officially joined Futurist movement 1915. Work tended toward personal version of social realism even while member of Futurist group. After World War I style changed; 1920's exhibited with *Novecento* group which sought return to nature, traditional techniques and subjects. Died in Milan.

Yves Tanguy 1900-1955

Born in Paris. 1918 joined Merchant Marines and travelled to South America and Africa. 1920 formed lasting friendship with film-maker and poet Jacques Prévert. 1923 started painting, inspired by seeing a work by de Chirico. Painted stark landscapes probably inspired by Brittany where he vacationed as a child. By 1927 had met André Breton and joined Surrealist group, exhibiting with them thereafter. Early 30's after trip to Africa, forms shifted from vegetal to mineral: "boneyard" images, chains of indeterminate beings in infinite landscapes. 1939 upon outbreak of War, to United States. 1940 married American Surrealist, Kay Sage. 1941 moved to Woodbury, Connecticut.
